Contents

I Historical Roots **5**

1 The Basic Concepts **6**
1.1 Thermodynamic Systems . . . 6
1.2 Equilibrium and Nonequilibrium Systems . . . 6
1.3 Temperature, Heat and Quantitative Laws of Gases . . . 6
1.4 States of Matter and the van der Walls Equation . . . 6

2 The First Law of Thermodynamics **7**
2.1 The Nature of Heat . . . 7
2.2 The First Law of Thermodynamics: Convservation of Energy . . . 7
2.3 Elementary Applications of the First Law . . . 7
2.4 Elementary Applications of the First Law . . . 7
2.5 Thermochemistry: Conservation of Energy in Chemical Reactions . . . 7
2.6 Extent of Reaction: A State Variable for Chemical Systems . . . 7
2.7 Convservation of Energy in Nuclear Reactions . . . 7

3 The Second Law of Thermodynamics and The Arrow of Time **8**
3.1 The Birth of the Second Law . . . 8
3.2 The Absolute Scale of Temperature . . . 8
3.3 The Second Law and the Comcept of Entropy . . . 8
3.4 Entropy, Reversible and Irreversible Processes . . . 8
3.5 Examples of Entropy Changes due to Irreversible Processes . . . 8
3.6 Entropy Changes Associated with Phase Transformations . . . 8
3.7 Entropy of an Ideal Gas . . . 8
3.8 Remarks on the Second Law and Irreversible Processes . . . 8

4 Entropy in The Realm of Chemical Reactions **9**
4.1 Chemical Potential and Affinity: The Driving Force of Chemical Reactions . 9
4.2 General Properties of Affinity . . . 9
4.3 Entropy Production due to Diffusion . . . 9
4.4 General Properties of Entropy . . . 9

II Equilibrium Thermodynamics **10**

5 Extermum Principles and General Thermodynamic Relations **11**
5.1 Extremum Priciples and the Second Law . . . 11
5.2 General Thermodynamic Relations . . . 11
5.3 Gibbs Free Energy of Formation and Chemical Potential . . . 11
5.4 Maxwell Relations . . . 11
5.5 Extensivity and Partial Molar Quantities . . . 11
5.6 Surface Tension . . . 11

6 Basic Thermodynamics of Gases, Liquids and Solids **12**
6.1 Thermodynamics of Ideal Gases . . . 12
6.2 Thermodynamics of Real Gases . . . 12
6.3 Thermodynamics Quantities for Pure Liquids and Solids . . . 12

7 Phase Change **13**
7.1 Phase Equilibrium and Phase Diagrams . . . 13
7.2 The Gibbs Phase Rule and Duhem's Theorem . . . 13
7.3 Binary and Ternary Systems . . . 13
7.4 Maxwell's Construction and the Lever Rule . . . 13
7.5 Phase Transitions . . . 13

8 Solutions **14**
8.1 Ideal and Nonideal Solutions . . . 14
8.2 Colligative Properties . . . 14
8.3 Solubility Equilibrium . . . 14
8.4 Mixing and Excess Functions . . . 14
8.5 Azeotropy . . . 14

9 Chemical Transformations **15**
9.1 Transformations of Matter . . . 15
9.2 Chemical Reaction Rates . . . 15
9.3 Chemical Equilibrium and the Law of Mass Action . . . 15
9.4 The Principle of Detailed Balance . . . 15
9.5 Entropy Production due to Chemical Reactions . . . 15

10 Fields and Internal Degrees of Freedom **16**
10.1 Chemical Potential in a Field . . . 16
10.2 Membranes and Electrochemical Cells . . . 16
10.3 Diffusion . . . 16
10.4 Chemical Potential for an Internal Degree of Freedom . . . 16

11 Thermodynamics of Radiation **17**
11.1 Energy Density and Intensity of Thermal Radiation . . . 17
11.2 The Equation of State . . . 17
11.3 Entropy and Adiabatic Processes . . . 17

11.4 Wien's Theorem . . . 17
11.5 Chemical Potential for Thermal Radiation . . . 17
11.6 Matter, Radiation and Zero Chemical Potential . . . 17

III Fluctions and Stability **18**

12 The Gibbs Stability Theory **19**
12.1 Classical Stability Theory . . . 19
12.2 Thermal Stability . . . 19
12.3 Mechanical Stability . . . 19
12.4 Stability and Fluctuations in Mole Number . . . 19

13 Critical Phenomena and Configurational Heat Capacity **20**
13.1 Stability and Critical Phenomena . . . 20
13.2 Stability and Critical Phenomena in Binary Solutions . . . 20
13.3 Configurational Heat Capacity . . . 20

14 Stability and Fluctuations Based on Entropy Production **21**
14.1 Stability and Entropy Productions . . . 21
14.2 Thermodynamic Theory of Fluctuations . . . 21

IV Linear Nonequilibrium Thermodynamics **22**

15 Nonequilibrium Thermodynamics: The Foundations **23**
15.1 Local Equilibrium . . . 23
15.2 Local Entropy Production . . . 23
15.3 Balance Equation for Concentration . . . 23
15.4 Energy Conservation in Open Systems . . . 23
15.5 The Entropy Balance Equation . . . 23

16 Nonequilibrium Thermodynamics: The Linear Regime **24**
16.1 Linear Phenomenological Laws . . . 24
16.2 Onsager Reciprocal Relations and the Symmetry Principle . . . 24
16.3 Thermoelectric Phenomena . . . 24
16.4 Diffusion . . . 24
16.5 Chemical Reactions . . . 24
16.6 Heat Conduction in Anisotropic Solids . . . 24
16.7 Electrokinetic Phenomena and the Saxen Relations . . . 24
16.8 Thermal Diffusion . . . 24

17 Nonequilibrium Stationary States and Their Stability: Linear Regime **25**
17.1 Stationary States under Nonequilibrium Conditions . . . 25
17.2 The Theorem of Minimum Entropy Production . . . 25
17.3 Time Variation of Entropy Production and the Stability of Stationary States 25

V Order Through Fluctuations **26**

18 Nonlinear Thermodynamics **27**
18.1 Far-From-Equilibrium Systems 27
18.2 General Properties of Entropy Production 27
18.3 Stability of Noneuilibrium Staionary States 27
18.4 Linear Stability Analysis 27

19 Dissipative Structures **28**
19.1 The Constructive Role of Irreversible Processes 28
19.2 Loss of Stability, Bifurcation and Symmetry Breaking 28
19.3 Chiral Symmetry Breaking and Life 28
19.4 Chemical Oscillations 28
19.5 Turing Structures and Propagating Waves 28
19.6 Structural Instability and Biochemical Evolution 28

20 Where Do We Go From Here **29**
20.1 References 29

Part I

Historical Roots

Chapter 1

The Basic Concepts

1.1 Thermodynamic Systems

1.2 Equilibrium and Nonequilibrium Systems

1.3 Temperature, Heat and Quantitative Laws of Gases

1.4 States of Matter and the van der Walls Equation

Chapter 2

The First Law of Thermodynamics

2.1 The Nature of Heat

2.2 The First Law of Thermodynamics: Convservation of Energy

2.3 Elementary Applications of the First Law

2.4 Elementary Applications of the First Law

2.5 Thermochemistry: Conservation of Energy in Chemical Reactions

2.6 Extent of Reaction: A State Variable for Chemical Systems

2.7 Convservation of Energy in Nuclear Reactions

Chapter 3

The Second Law of Thermodynamics and The Arrow of Time

3.1 The Birth of the Second Law

3.2 The Absolute Scale of Temperature

3.3 The Second Law and the Comcept of Entropy

3.4 Entropy, Reversible and Irreversible Processes

3.5 Examples of Entropy Changes due to Irreversible Processes

3.6 Entropy Changes Associated with Phase Transformations

3.7 Entropy of an Ideal Gas

3.8 Remarks on the Second Law and Irreversible Processes

Chapter 4

Entropy in The Realm of Chemical Reactions

4.1 Chemical Potential and Affinity: The Driving Force of Chemical Reactions

4.2 General Properties of Affinity

4.3 Entropy Production due to Diffusion

4.4 General Properties of Entropy

Part II

Equilibrium Thermodynamics

Chapter 5

Extermum Principles and General Thermodynamic Relations

5.1 Extremum Priciples and the Second Law

5.2 General Thermodynamic Relations

5.3 Gibbs Free Energy of Formation and Chemical Potential

5.4 Maxwell Relations

5.5 Extensivity and Partial Molar Quantities

5.6 Surface Tension

Chapter 6

Basic Thermodynamics of Gases, Liquids and Solids

6.1 Thermodynamics of Ideal Gases

6.2 Thermodynamics of Real Gases

6.3 Thermodynamics Quantities for Pure Liquids and Solids

Chapter 7

Phase Change

7.1 Phase Equilibrium and Phase Diagrams

7.2 The Gibbs Phase Rule and Duhem's Theorem

7.3 Binary and Ternary Systems

7.4 Maxwell's Construction and the Lever Rule

7.5 Phase Transitions

Chapter 8

Solutions

8.1 Ideal and Nonideal Solutions

8.2 Colligative Properties

8.3 Solubility Equilibrium

8.4 Mixing and Excess Functions

8.5 Azeotropy

Chapter 9

Chemical Transformations

9.1 Transformations of Matter

9.2 Chemical Reaction Rates

9.3 Chemical Equilibrium and the Law of Mass Action

9.4 The Principle of Detailed Balance

9.5 Entropy Production due to Chemical Reactions

Chapter 10

Fields and Internal Degrees of Freedom

10.1 Chemical Potential in a Field

10.2 Membranes and Electrochemical Cells

10.3 Diffusion

10.4 Chemical Potential for an Internal Degree of Freedom

Chapter 11

Thermodynamics of Radiation

11.1 Energy Density and Intensity of Thermal Radiation

11.2 The Equation of State

11.3 Entropy and Adiabatic Processes

11.4 Wien's Theorem

11.5 Chemical Potential for Thermal Radiation

11.6 Matter, Radiation and Zero Chemical Potential

Part III

Fluctions and Stability

Chapter 12

The Gibbs Stability Theory

12.1 Classical Stability Theory

12.2 Thermal Stability

12.3 Mechanical Stability

12.4 Stability and Fluctuations in Mole Number

Chapter 13

Critical Phenomena and Configurational Heat Capacity

13.1 Stability and Critical Phenomena

13.2 Stability and Critical Phenomena in Binary Solutions

13.3 Configurational Heat Capacity

Chapter 14

Stability and Fluctuations Based on Entropy Production

14.1 Stability and Entropy Productions

14.2 Thermodynamic Theory of Fluctuations

Part IV

Linear Nonequilibrium Thermodynamics

Chapter 15

Nonequilibrium Thermodynamics: The Foundations

15.1 Local Equilibrium

15.2 Local Entropy Production

15.3 Balance Equation for Concentration

15.4 Energy Conservation in Open Systems

15.5 The Entropy Balance Equation

Chapter 16

Nonequilibrium Thermodynamics: The Linear Regime

16.1 Linear Phenomenological Laws

16.2 Onsager Reciprocal Relations and the Symmetry Principle

16.3 Thermoelectric Phenomena

16.4 Diffusion

16.5 Chemical Reactions

16.6 Heat Conduction in Anisotropic Solids

16.7 Electrokinetic Phenomena and the Saxen Relations

16.8 Thermal Diffusion

Chapter 17

Nonequilibrium Stationary States and Their Stability: Linear Regime

17.1 Stationary States under Nonequilibrium Conditions

17.2 The Theorem of Minimum Entropy Production

17.3 Time Variation of Entropy Production and the Stability of Stationary States

Part V

Order Through Fluctuations

Chapter 18

Nonlinear Thermodynamics

18.1 Far-From-Equilibrium Systems

18.2 General Properties of Entropy Production

18.3 Stability of Noneuilibrium Staionary States

18.4 Linear Stability Analysis

Chapter 19

Dissipative Structures

19.1 The Constructive Role of Irreversible Processes

19.2 Loss of Stability, Bifurcation and Symmetry Breaking

19.3 Chiral Symmetry Breaking and Life

19.4 Chemical Oscillations

19.5 Turing Structures and Propagating Waves

19.6 Structural Instability and Biochemical Evolution

Chapter 20
